

|| 🧑 GET2 TEST RESULTS ||

📊 GET2 Test Enterprise Rating

The GET2 test defines an enterprising tendency as the tendency to start up and manage projects - highly enterprising people do this more often and are more innovative in their approach. This self-assessment test aims to give you an idea of your own enterprising potential, although it is important to note that there is much academic debate about the most important characteristics of enterprising people, and there is a role for education and training in helping people develop their potential. Your responses to the test suggest the following results:

Occasionally enterprising

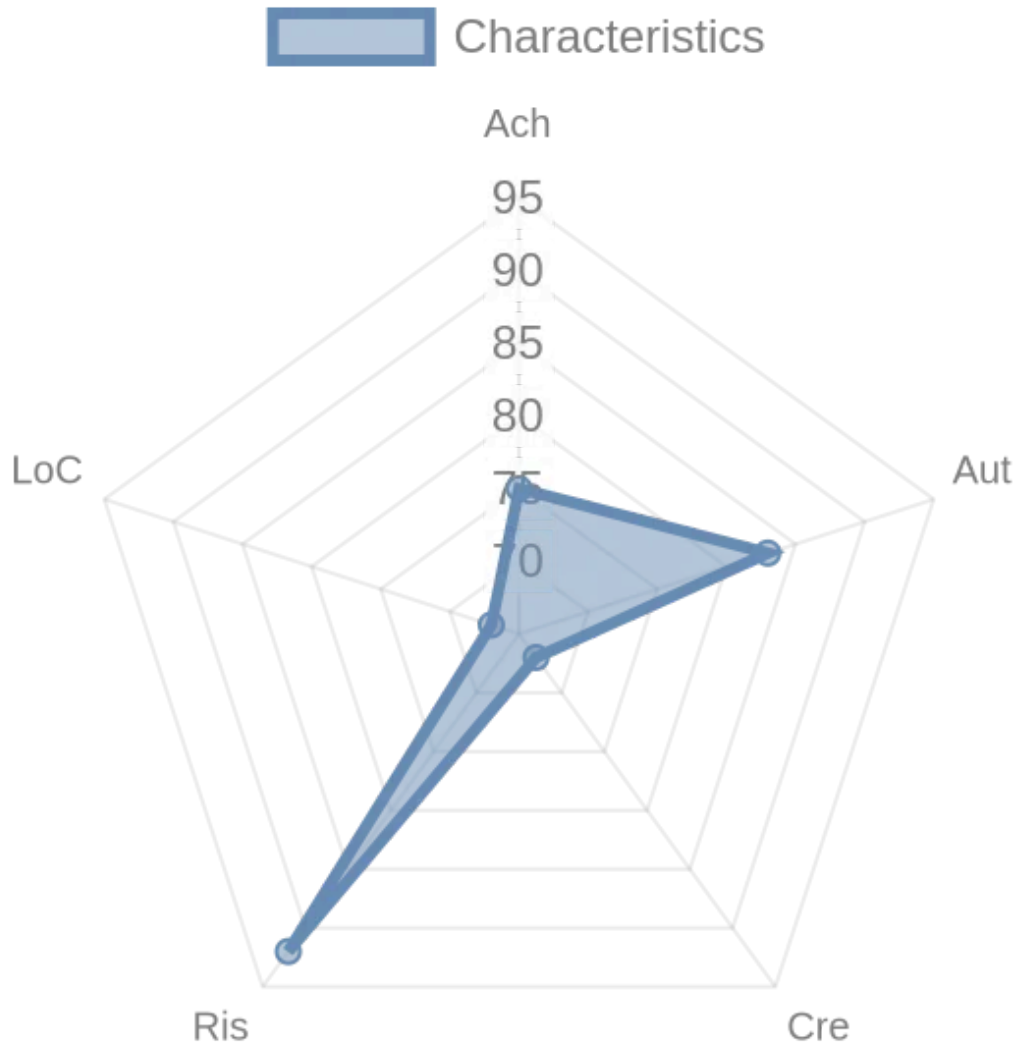

The overall GET2 test score of **76%** suggests that you are likely to have strengths in some areas of enterprise and may be enterprising in some contexts. At this time in your life you may find that you are content to work on a limited number of

projects and may be happy to be enterprising either within employment as an intrapreneur, or in your leisure time through voluntary community projects. However, if you have ambitions to have an innovative growth business, there is much you can learn and do. Several universities, such as the Open University offer free courses online which may help you to build up your business knowledge and skills (see <http://openlearn.open.ac.uk> (<http://openlearn.open.ac.uk>)). There are also many MOOCs (Massive Online Open Courses) freely available on the FutureLearn platform (<https://www.futurelearn.com> (<https://www.futurelearn.com>)) to help you to learn about technology, business and the economy, learn languages and so on. If you have never set up an enterprise before you might consider starting a small project in your community that represents a minimal risk to your time and money, to build up your experience and expertise.

General Enterprising Tendancy (GET2) Test Result Summary

The radar plot shows a summation of the characteristics of your GET2 test score percentages graphically.

Ach = Need for Achievement | Aut = Need for Autonomy | Cre = Creative Tendency
Ris = Calculated Risk-taking | LoC = Locus of control (% percentages)

The radar plot can provide a useful single figure that shows the 'shape' of your characteristics at one glance. It is interesting to compare this shape with that of others who have taken the test, or of yourself if you take the test at later stages of your life. Each axis of the plot shows the value for one of the characteristics.

★ Need for Achievement

Achievement

Having a medium Need for Achievement score of 75%, you may recognise some of the following characteristics in yourself:

- A future-focused orientation
- Reliance on your own abilities
- An optimistic rather than a pessimistic outlook
- A focus on tasks and outcomes
- Effective time management
- A result-oriented approach towards managing yourself and others
- A restlessness with high levels of energy and drive
- Opinionatedness with a readiness to defend your ideas and views
- Determination to ensure your objectives are met even when difficulties arise
- A strong sense of responsibility and persistence in pursuing your aims
- Goal-orientated, setting challenging yet realistic goals
- Hardworking, showing willingness to work long and hard when necessary to complete tasks.

A medium level of achievement motivation can support productivity, while also allowing priority to be given to maintaining a healthy balance between work and other important aspects of life.

Need for Autonomy

Autonomy

Your Need for Autonomy (or independence) scored 83% which is high. This means that you may recognise the following characteristics in yourself:

- Independence, preferring to work alone especially if you cannot be in charge
- Strong self-expression, feeling a need to approach tasks in your own way rather than work on other people's plans
- A distinctive sense of individualism, enabling you to stand alone even when pressurised by others
- An orientation towards leadership, with a preference for being in charge, making the significant decisions, rather than being directed by others
- Unconventional, being prepared to stand out as being different to others
- Opinionated, with a readiness to express views openly
- Determination, being strong willed and stubborn in pursuing your interests.

A high Need for Autonomy indicates that you place a strong value on independence and personal freedom in your work. You are likely to prefer to work on your own terms rather than within a highly structured organisational environment. A high Need for Autonomy suggests you may enjoy taking charge of the projects you are involved with, shaping their direction, although may feel less comfortable in roles where you are closely directed by authority figures. On a related note, you may benefit from working on developing stronger working relationships with clients, colleagues, suppliers, and other stakeholders, as these connections can be valuable in sustaining the success of enterprises of any size.

Creative Tendency

Creative tendency

Having a medium Creative Tendency score of 67%, you may see yourself as being creative, even if you are not especially attracted to especially radical or disruptive ideas with game changing impacts. Your strengths may lie in recognising the innovation potential within emerging concepts and technologies and applying these skilfully in your work. You may be especially adept at converting ideas into practical innovation, for example, developing new or improved products, refining processes, improving systems, or introducing practical improvements that add clear value in the workplace. If you wished to cultivate a more innovative approach, you might like to consider further developing your own latent creative abilities. Creativity often requires some time for relaxation, which can be challenging when you are busy with work or education. The most favourable conditions for creative thinking tend to require a relaxed mental space where you suspend critical thinking or thinking too fixedly on a problem. Techniques, such as brainstorming or mind-mapping can generate a wide range of ideas without filtering ideas prematurely. Allowing time for reflection and purposeful idleness can support the subconscious incubation of ideas, sometimes leading to sudden unexpected insights or Eureka moments of clarity. In practice, creativity is often an iterative process of thinking shaped by cycles of exploration, reflection and refinement within a relaxed and open context.

⚡ Calculated Risk-Taking

Calculated risk-taking

You scored 92% for calculated risk-taking, which is High. This suggests that you may recognise the following characteristics in yourself:

- Decisiveness, having the confidence to act on incomplete information when appropriate
- Strong self-awareness, enabling you to assess your capabilities realistically
- An analytical approach, carefully evaluating the potential benefits against the possible costs
- A goal-oriented approach, setting challenging but attainable objectives
- Effective information management, assessing both potential costs and the probabilities of success to inform decision making.

A high score in Calculated Risk-taking suggest that you are likely to be very skilled at sizing up opportunities and evaluating both the potential costs and probabilities of success. This helps you to take well-considered decisions and informed risks with some confidence.

Locus of Control

Locus of Control

Having a medium score of 67%, you may recognise yourself as being quite self-confident and proactive. However, if you wish to establish a business or enterprise, you may benefit from further strengthening your self-confidence and developing the competencies required for sustaining the success of your enterprise. In particular, developing your ability to shape and control the development of your ideas could be important. Without sufficient confidence, there is a possibility that others (e.g. business partners) may steer your ideas in directions that do not fully align with your own intentions. Developing specific skills, for example in business planning or project management, can help to strengthen both your confidence and authority in decision-making. Stronger self-confidence can also help to ensure that your business partnerships remain balanced and that you retain appropriate influence and independence within an enterprise.

 General Enterprising Tendancy (GET2) Test Result Summary

The summary below presents the characteristics of your GET2 test scores. You can save this report off so that you can compare your chart with someone else’s chart, or you can compare your own chart with a new chart if you decide to re-take the test at a future date.

GET Score	76%
Achieve	75%
Autonomy	83%
Creative	67%
Risk taking	92%
Control	67%
