

Part 1. End Of Unit Self - Assessment

Use the following to identify your level of achievement in the following areas. Consider how you might evidence them if you were asked (i.e., in a job or placement interview).

	Professional Equivalent to years of work experience	Competent Ready for the workforce	Developing Doing ok but need work	Starting Needs a lot of work	My End Of Unit Evaluation
Communication					
Organising and expressing ideas concisely.	☐	☐	TICK	☐	I believe my ability to express ideas concisely has improved significantly over the year, I have not however changed my self-assessed proficiency as I believe I need more experience with rigorous mathematical communication. I did not achieve my original evidencing of improvement, however I believe I have evidenced improvement in “Artefact: Weekly-Log-2026-05-05.md” and “Artefact: project_explanation_script.md”.
Speaking clearly and directly to individuals or groups.	TICK	☐	☐	☐	A weakness of mine in this area that I highlighted at the beginning of the year was lacking engagement when speaking. Following comments from others I am confident in increasing my self-assessed proficiency. I have successfully evidenced my improvement in “Artefact: project_explanation_script.md”.
Developing arguments from scientific, philosophical and ethical perspectives.	☐	TICK	☐	☐	I believe I have thoroughly evidenced my improvement in constructing scientific arguments as demonstrated by “Artefact: Weekly-Log-2026-05-05.md”.
Teamwork					
Working in a team to achieve a common goal.	☐	☐	TICK	☐	I have not changed my self-assessed proficiency in this area due to a lack of teamwork opportunity in my project. Collaborative work can be seen in “Artefact: Weekly-Log-2026-05-05.md” and “Artefact: Weekly-Log-2026-07-20.md”.
Sharing information, supporting and empowering other team members	☐	TICK	☐	☐	I have not changed my self-assessed proficiency in this area due to a lack of teamwork opportunity in my project. Evidence of my sharing feedback and information with others (my supervisors) can be seen in “Artefact: Weekly-Log-2026-05-05.md”.

Responding constructively to the opinions of others.	☐	TICK	☐	☐	I have not changed my self-assessed proficiency in this area as I cannot say I have made significant improvement. Demonstrations of my responding constructively to others' opinions can be seen in "Artefact: Weekly-Log-2026-05-05.md" and "Artefact: Meeting_Notes_2026_08_13.md".
Problem Identification and Solution					
Researching and selecting relevant information to solve a problem.	☐	☐	☐	TICK	I unfortunately cannot say I have improved as much as I desired in my research ability which I identified as particularly lacking at the beginning of the year. I have not been able to evidence my improvement with literary research. I have become significantly more skilled at codebase and documentation research through T8code as evidenced in my weekly logs, for example "Artefact: Weekly-Log-2026-06-08.md".
Analysing issues for underlying causes, assessing options, proposing solutions	TICK	☐	☐	☐	I believe I have improved in this area, especially in relation to resolving technical issues (e.g. errors and bugs). I have refined and grown my repertoire significantly including debuggers, test suites, and mathematical proofs of algorithms. This is evidenced, as an example, in "Artefact: Weekly-Log-2026-07-20.md"
Thinking sequentially, critiquing and synthesizing information	☐	TICK	☐	☐	I believe I have notably improved in this area, especially in regard to sequential thinking. I have not increased my self-assessed proficiency as I have found algorithmic errors slipping through my criticism in my work. My improvement can be seen in "Artefact: Weekly-Log-2026-05-05.md" and "Artefact: Weekly-Log-2026-06-22.md".
Initiative and Enterprise					
Easily adjusting to new situation	☐	TICK	☐	☐	I believe I have incrementally improved my adaptability, primarily through experiences as a CQS and ComSSA committee member. I have not evidenced my improvement.
Mapping out ideas to an action plan	☐	☐	☐	TICK	I have decreased my self-assessed proficiency in mapping out an action, primarily due to my failures in this project related to deliverable timeline planning. As covered in a reflection, my planned timeline was significantly misinformed

					and inaccurate. An artefact reinforcing this idea is “Artefact: mid_year_presentation_timeline.png”.
Identifying innovative options	□	TICK	□	□	I have increased my self-assessed proficiency in identifying innovative options as I believe I have much better positioned to research, construct, and analyse innovative ideas, though still minor, in high-performance computing and mathematics as I cover in depth in a reflection and have evidenced via “Artefact: Weekly-Log-2026-05-05.md”.
Planning and Organisation					
Managing timelines and prioritising	□	□	□	TICK	I have decreased my self-assessed proficiency in managing timelines after my significant failures in timeline construction. While I have not yet had to excessively cram to avoid complete failure, my initial timeline I constructed was, frankly, embarrassingly inaccurate. My critical self-assessment is justified by “Artefact: mid_year_presentation_timeline.png”.
Allocating and coordinating tasks for self and others	□	TICK	□	□	I believe I have improved in my task allocation skills, particularly with task scoping, a skill I identified as a weak point earlier in the year. This was evidenced by the final section (quote) in “Artefact: Weekly-Log-2026-05-05.md”.
Anticipating future needs and forward planning	□	□	TICK	□	While I believe I have improved in my technical future planning thanks to advice from my supervisors, I also believe my project future planning (again, timeline construction) was inadequate.
Use of Tools and Technology					
Proficiency in using computers and telecommunications systems	TICK	□	□	□	I maintain a strong confidence in my computer and telecommunication skills. Additionally, my field specific technical skills have advanced tremendously, specifically with HPC environments. My improvement is evidenced, as an example, in “Artefact: Gadi_Build_Script.md”, “Artefact: Dependency_Graph.svg”, and “Artefact: Refined_Dependency_Graph.svg”.
Understanding current trends and developments	□	□	TICK	□	I have increased my self-assessed proficiency in understanding current trends and developments. I have integrated more new tools and best practices

					into my work, specifically regarding LLMs. Additionally, having researched the high-performance computing space more and had more exposure to mathematical research I feel more comfortable in my understanding of the trends in these fields. This is evidenced in “Artefact: Meeting_Notes_2026_08_13.md”
Managing information through technology	□	TICK	□	□	While I did not fulfil my original condition for evidencing improvement, I have increased my self-assessed proficiency regarding managing information through technology. I have refined my methodology, e.g. thorough weekly logs, the use of Markdown, and further proficiency with Git. This is demonstrated through my weekly log samples, as can be seen in the “Artifacts” subdirectory.
